

SciencesPo

Troubleshooting for **SciencesPo-Guest** Wi-Fi access

Make sure that Wi-Fi is activated on your device. **Search for available networks:** access the Wi-Fi settings and select the **SciencesPo-Guest** network.

The SciencesPo-Guest Wi-Fi registration page is not displayed? Certain default settings activated on your equipment may block the automatic registration process. For example, on an iPhone, disable the **Private Wi-Fi address** and **Limit IP address tracking** options.

Fill in the required identification information: your e-mail address (not Sciences Po) and **accept the terms of use.**

From the same device, access your mailbox and click on the link to activate your account.

Please note: the link is only valid for 10 minutes. After this time, if you have not activated your account, you will have to restart the registration process.

Once the link has been validated, you should be redirected to **the Sciences Po page** <https://www.sciencespo.fr>. Check your connection by visiting the site of your choice.
